

Blind hollow shaft

Magnetic single- or multiturn encoders

### Overview

- Encoder single- or multiturn / Analog
- E1 compliant designHigh protection up to IP 67
- High resistance to shock and vibrations
- Protection against corrosion CX (C5-M)
- Wire cross section 0.5 mm<sup>2</sup>
- Teach input for adjustment of measuring range
- Applicable up to PLd (ISO 13849)

Blind hollow shaft

Magnetic single- or multiturn encoders

### **General information**

Self-heating interrelated to speed, protection, attachment method and ambient conditions as well electronics and supply voltage must be considered for precise thermal dimensioning. Self-heating is supposed to approximates 12 K (IP 67 protection) per 1000 rpm. Operating the encoder close to the maximum limits requires measuring the real prevailing temperature at the encoder flange. For the current output (version C4), a load >470 Ohm must be selected when supplied with 24 VDC in order to minimize the self-heating of the encoder and not to exceed the maximum operating temperature. For cable lengths >2 m, a current output (version C4) is to be preferred due to the voltage drop in order to avoid effects on the accuracy.

### **Terminal assignment**

#### Flange connector M12, 5-pin Signals Description 0 V Supply voltage 2 +Vs Supply voltage 3 Uout/Iout Analog output 4 DV DATAVALID output Teach Teach input

### **Output signals**

### Singleturn

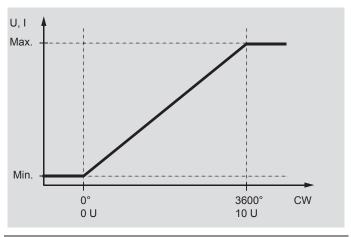

Default: CW, 360°, rotating direction and measuring range teachable.

### Multiturn

Default: CW, 10 turns, rotating direction and measuring range teachable (max. 32767 turns).

Note: The encoder can be mounted at a specific position and set to position 1 by means of factory preset.

Blind hollow shaft

Magnetic single- or multiturn encoders

### **Teach process**

### Activate teach process

Start teach process within 5 minutes after power on. Set teach input for >5 seconds on HIGH and afterwards on LOW level. DV/Status output: Oscillates after 5 seconds.

### Position 1

Get encoder on position intended for min. voltage output / current output. Set teach input for >0.1 seconds on HIGH. DV/Status output: Switches to HIGH level for 3 seconds and flashes shortly.

### Position 2

Get encoder on position intended for max. voltage output / current output. Set teach input for >0.1 seconds on HIGH.

DV/Status output: Switches to HIGH level for 3 seconds and flashes

DV/Status output: Switches to HIGH level for 3 seconds and flashes shortly. If measuring range is exceeded or the limits are too close to each other, the teaching process was not successful and has to be repeated.

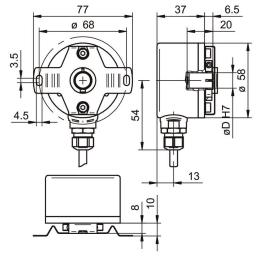

### Default

Set teach input for >15 seconds on HIGH. DV/Status output: Oscillates after 5 seconds.

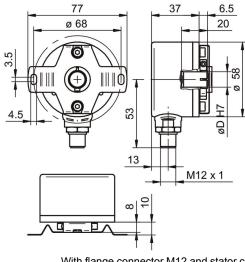

Blind hollow shaft

Magnetic single- or multiturn encoders

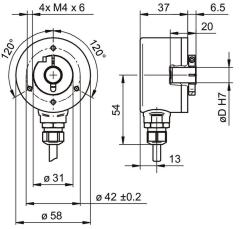

### **Dimensions**

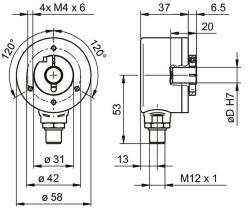

With cable and stator coupling

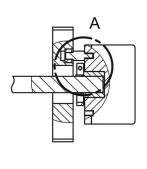

With flange connector M12 and stator coupling

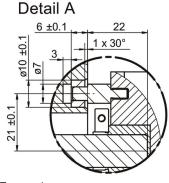

With cable w/o stator coupling

With flange connector M12 w/o stator coupling
