MR752.10A

Small measuring wheel Article number: 11011440

Overview

- Circumference 30.48 cm
- Surface profile: Smooth
- Surface material: Polyurethan
- Bore ø10 mm

Technical data	
Technical data	
Outer diameter	97.02 ±0.06 mm
Operating temperature	-30+80 °C
Surface material	Polyurethan
Wheel material	Aluminium
Surface profile	Smooth
Suitable measuring material surface	Wire Wood Plastic Painted material Metal Paper

Technical data	
Circumference	30.48 cm
Bore	ø10 mm
Fastening torque/pin	1.5 Nm
Surface hardness, approx.	90° Shore A

Description

When selecting a measuring wheel the kind of material to be measured has to be taken into consideration prior to any decision on wheel surface respectively cover lining. The wheel circumference depends on the space available as well as on the size of counter or encoder.

Cardboard

The smaller the measuring wheel, the more force required at the wheel circumference and consequently the higher the risk of slippage and incorrect measuring results. Also the width of the measuring wheel has an impact on the result.

Measuring accuracy

Precise measuring results of a meter counter with measuring wheel depend on:

- Kind of measured material
- Contact angle
- Torque of counter or encoder
- Feeding speed
- Strain of measured material
- Surface roughness
- Contact pressure of material against measuring wheel
- Elastictiy of measured material
- Diametrical tolerance of the measuring wheel
